

ABSTRACT OF THE DISCLOSURE

Disclosed is a system for utilizing a mobile communication terminal as a wireless headset, comprising: a personal computer (PC) adapted to access to an Internet phone service through an Internet network; and mobile communication terminal for performing a function of a wireless headset of the PC when the PC accesses the Internet phone service, wherein the mobile communication terminal have a bluetooth function. The present invention allows a user to utilize a mobile communication terminal having a Bluetooth function built therein as a wireless headset of the PC, making it possible for him/her to conveniently use an Internet phone call service. Further, when an operation mode of the mobile communication terminal is set to a headset mode, a speech signal of a user inputted through a microphone is transmitted to the PC directly via a Bluetooth device and the speech signal of a counterpart inputted to the mobile communication terminal from the PC is applied to a speaker via the Bluetooth device.
